About us Hadi Teherani – born in Tehran in 1954, grew up in Hamburg – is an extremely productive and diverse, internationally awarded German architect and designer. His work is executed regardless of borders in every respect, transcending nationalities and specialist disciplines. The projects target atmospheric charisma, emotional urgency and an ecologically sound sustainability that is already laid out in the design. The first “green” railway station in Germany at Frankfurt Airport and the Cologne “Crane Houses” on the banks of the River Rhine have become effective landmarks to a large extent like many international projects. In his unusually far-reaching competence from architecture to urban planning, to interior and product design, compositions succeed in which all elements interact harmoniously. Abu Dhabi, Berlin, Dubai, Hamburg, Istanbul, Copenhagen, Rome and Tehran are some of the metropolitan cities for which plans are being drawn up, as well as Moscow and Mumbai. The e-bike, the conference table (Thonet), leather seating furniture (Walter Knoll), a modular kitchen (Poggenpohl), lights (Zumtobel/Louis Poulsen), showrooms and flagship stores (Kiton) likewise belong to the catalogue of works, just as high-rise buildings, corporate centres, council offices, shopping worlds, stock markets, railway stations, schools and universities. In recent years particularly innovative concepts for sustainable urban residential construction have been developed and realised.
